# AI Document Extraction & Quality Evaluator Task Brief

Downloadable task brief for approved candidate work.

## Candidate and role

Candidate: Review copy

Application ID: review-copy-ai-document-extraction-quality-evaluator

Company: Trinity-AI

Role: AI Document Extraction & Quality Evaluator

Task category: AI image-document extraction evaluation

Required skills: AI evaluation, document extraction

## Before you start

- Read the job description carefully and make sure your work sample matches the actual role.
- Advanced: degraded CCTV document footage requires field-level evidence, arithmetic reconciliation, readability grading, and strict handling of ambiguous values.
- Estimated time: 90 minutes to 2 hours including field extraction, arithmetic checks, exception handling, quality review, and upload.
- This is a one-task assignment. Submit once the deliverable is complete.

## Task to complete

- Open the attached CCTV-quality receipt and invoice image, establish which fields are readable, and create a field inventory before correcting the AI output.
- For every field, compare the AI value with the visible source, record a source region and readability grade, and distinguish an extraction error from an absent field.
- Recalculate line-item amounts, subtotal, tax, and total independently. If the arithmetic or currency is not fully supported, flag the inconsistency instead of repairing it silently.
- Normalize dates to YYYY-MM-DD and amounts to two decimal places only after preserving the literal source value. Never invent unreadable supplier names, payment states, or digits.
- Complete a second-pass audit of all Review rows and write a reviewer handoff explaining what additional image or source document would resolve each ambiguity.

## Task packet

Attached image: ai-document-extraction-01.jpg. CCTV limitations: blur, scanlines, glare, and timestamp overlay may make small characters or decimal points uncertain.

**DOC-IMG-001**
AI extraction: document_type=receipt; date=2024-06-14; currency=USD; subtotal=10.60; tax=0.85; total=11.45
Review focus: reconcile visible line items and totals.

**DOC-IMG-002**
AI extraction: document_type=invoice; invoice_no=1027; invoice_date=2024-06-14; due_date=2024-06-28
Review focus: verify dates and identifiers field by field, not from the document title alone.

**DOC-IMG-003**
AI extraction: line_items=[Office Chair x 2 at 75.00, Desk Lamp x 1 at 26.50, Monitor Stand x 1 at 34.00, Cable Organizer x 3 at 6.00]
Review focus: check multiplication, row alignment, and whether any text is too degraded to verify.

**DOC-IMG-004**
AI extraction: payment_status=Paid; amount_paid=11.45
Review focus: distinguish a visible payment method or amount from a full payment-status claim.

**DOC-IMG-005**
AI extraction: receipt_id=000842; register=3; time=10:28:17
Review focus: preserve leading zeroes and mark any digit affected by blur.

**DOC-IMG-006**
AI extraction: currency=USD; tax_rate=8%; tax=18.28; total=246.78
Review focus: independently recompute invoice arithmetic and flag any mismatch.

**DOC-IMG-007**
AI extraction: supplier=Office Supply Co.; customer=Trinity-AI
Review focus: reject names that are not printed or inferable from the source.

**DOC-IMG-008**

AI extraction: document_type=invoice; status=Final
Review focus: identify unsupported workflow status and recommend Review.

Required output columns: image_id, field, ai_value, corrected_value, action, source_region, readability, arithmetic_check, confidence, notes.

## What to submit

- A CSV or spreadsheet containing one row for every extracted field reviewed and the required output columns, including source region and readability.
- An arithmetic reconciliation sheet showing each line-item calculation, subtotal, tax, and total check separately.
- A reviewer handoff listing every field marked Review, the evidence gap, and the exact source document or crop needed to resolve it.
- The final filename or upload reference needed for reviewer evaluation.

## Review checklist

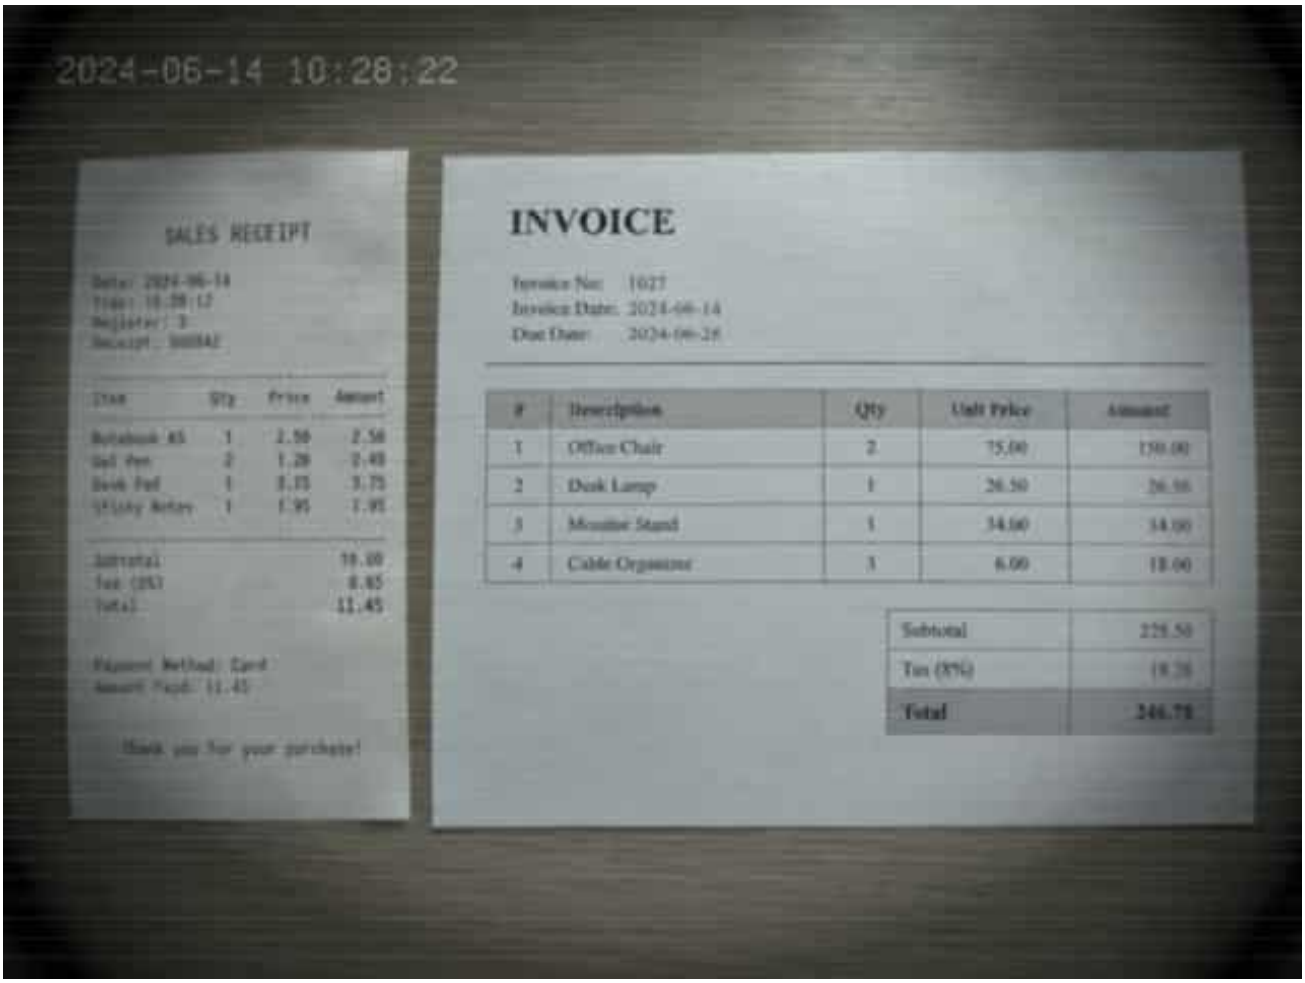

- All eight field groups are reviewed with source regions, readability, confidence, and explicit actions.
- Leading zeroes, decimals, dates, and line-item arithmetic are preserved or corrected only with evidence.
- Unreadable, absent, inferred, and workflow-status claims are flagged instead of silently fabricated.
- The arithmetic reconciliation and reviewer handoff make every exception auditable and actionable.

## After upload

- Your home page status will move to Pending task review after you submit.
- Cash is credited only after reviewers mark the completed work successful and payout eligibility is confirmed.
- If the task involves another participant, include their name and contact details in the submission notes for operations review.

How to complete the response tables

Compare each AI extraction with the visible document. Preserve literal values, distinguish unreadable from absent, and recalculate arithmetic instead of silently repairing it.

| FIELD | WHAT IT MEANS | HOW TO ANSWER | EXAMPLE |
|---|---|---|---|
| **Corrected value** | The value you believe the source supports after checking the AI extraction. | Preserve the literal source value first; add a normalized value only when the source supports it. Use Unknown when characters cannot be verified. | Keep 000842 with its leading zeroes; do not rewrite it as 842. |
| **Action** | What should happen to the AI value. | Accept when supported; Correct when the visible source shows another value; Review when the source is ambiguous or incomplete. | Review when a decimal point is blurred and changes the total. |
| **Source region** | Where the field appears on the receipt or invoice image. | Name a stable area such as top-right date block, center line-item row, or bottom total block. | Bottom-right total block. |
| **Readability** | How clearly the source field can be read. | Clear = readable; Partial = some characters or punctuation uncertain; Unreadable = cannot verify the value. | Partial when the last digit is hidden by glare. |
| **Arithmetic check** | Whether the quantities and amounts reconcile mathematically. | Pass when calculations agree; Fail when they do not; N/A when the field is not numeric. | 2 x 75.00 = 150.00; mark Pass for that line item. |
| **Confidence** | Your certainty after checking the source and calculations. | High = clear; Medium = minor uncertainty; Low = meaningful ambiguity remains. | Low when tax and total cannot be separated because of blur. |
| **Notes / evidence gap** | What a reviewer needs to know to reproduce or resolve your decision. | State the mismatch, missing evidence, or exact crop/source document needed next. | Payment status is not printed; request the original transaction record. |

Guided response tables for the attached task brief

## Extraction table - values and quality actions

The AI extraction is pre-filled. Complete the corrected value, action, readability, and arithmetic columns.

| CASE ID | AI EXTRACTION | CORRECTED VALUE | ACTION | READABILITY | ARITHMETIC CHECK |
|---|---|---|---|---|---|
| DOC-IMG-001 | document_type=receipt; date=2024-06-14; currency=USD; subtotal=10.60; tax=0.85; total=11.45 | | | | |
| DOC-IMG-002 | document_type=invoice; invoice_no=1027; invoice_date=2024-06-14; due_date=2024-06-28 | | | | |
| DOC-IMG-003 | line_items=[Office Chair x 2 at 75.00, Desk Lamp x 1 at 26.50, Monitor Stand x 1 at 34.00, Cable Organizer x 3 at 6.00] | | | | |
| DOC-IMG-004 | payment_status=Paid; amount_paid=11.45 | | | | |

## Completion summary and reviewer hand-off

Complete these fields after the row-level tables. Use the field guide when deciding what evidence belongs in each response.

| SUMMARY ITEM | CANDIDATE RESPONSE |
| --- | --- |
| **Arithmetic reconciliation: line items, subtotal, tax, total** | |
| **Reviewer hand-off: every Review row and evidence gap** | |
| **Normalization note: literal vs normalized values** | |
| **Final filename or upload reference** | |
