AI Response Quality Evaluator Task Brief

Downloadable task brief for approved candidate work.

Candidate and role

Candidate: Review copy

Application ID: review-copy-ai-response-quality-evaluator

Company: Trinity-AI

Role: AI Response Quality Evaluator

Task category: AI visual response quality evaluation

Required skills: AI evaluation, factuality

Before you start

- Read the job description carefully and make sure your work sample matches the actual role.
- Advanced: degraded CCTV footage creates hard negatives, unreadable text, counting ambiguity, and conflicts between factuality and instruction following.
- Estimated time: 90 minutes to 2 hours including evidence mapping, scoring, correction, adversarial checks, and upload.
- This is a one-task assignment. Submit once the deliverable is complete.

Task to complete

- Use the attached CCTV-quality market image as the source of truth and create an evidence map before grading the model responses.
- Score each response for factuality, completeness, instruction following, and unsupported specificity. Check every count, color, object, action, location, and text claim separately.
- When a prompt requests impossible precision, the correct response must state the limitation and still answer the verifiable portion. Do not reward confident guessing.
- Write a corrected response, severity, and evidence-region reference. Then run an adversarial check for plausible details that are not actually visible.
- Summarize the model's systematic failure pattern and recommend one evaluation rule change or data-collection improvement.

Task packet

Attached image: ai-response-quality-01.jpg. CCTV limitations: people and small price-card text are partially blurred; counts must be conservative.

VIS-RQ-001
Prompt: Name the clearly visible produce and their counts.
AI response: There are three oranges and a bunch of bananas.
Review focus: count only clearly visible items and distinguish a bunch from individual units.

VIS-RQ-002
Prompt: What color is the reusable bag? Answer in one word.
AI response: The bag is blue and belongs to a shopper.
Review focus: instruction failure from extra text and unsupported ownership.

VIS-RQ-003
Prompt: Read the price card exactly.
AI response: The card says 'Organic fruit 5.00'.
Review focus: text legibility; fail exact transcription when CCTV footage cannot support it.

VIS-RQ-004
Prompt: Describe the scene in one sentence without guessing the location.
AI response: This is a market stall in Nairobi selling fresh fruit.
Review focus: remove unsupported city, provenance, and product claims.

VIS-RQ-005
Prompt: List every blue object, and do not include people.
AI response: Blue reusable bag, blue shirt, and blue wall.
Review focus: exhaustive-list claim, absent wall, and ambiguity around clothing.

VIS-RQ-006
Prompt: How many customers are buying vegetables?
AI response: Two customers are buying vegetables.
Review focus: distinguish visible people from inferred actions and count only supported participants.

VIS-RQ-007
Prompt: Answer yes or no: is the mug empty?
AI response: Yes, the yellow mug is empty.
Review focus: hidden contents and forced binary uncertainty.

VIS-RQ-008
Prompt: Give a two-sentence description using only visible facts.
AI response: A cheerful farmer sells organic produce at a weekend market.
Review focus: emotion, occupation, organic status, and event timing are unsupported.

Required ratings: factuality=Pass, Partial, or Fail; instruction_following=Pass or Fail; severity=Low, Medium, or High; confidence=High, Medium, or Low.

What to submit

- A CSV or spreadsheet with columns: case_id, prompt, ai_response, evidence_region, factuality, instruction_following, severity, corrected_response, confidence, rationale.

- An evidence map listing the image facts reviewers are allowed to use and the details that remain unknown because of CCTV quality.

- A failure-pattern memo identifying at least two systematic errors and one recommended rubric or data improvement.

- The final filename or upload reference needed for reviewer evaluation.

Review checklist

- All eight cases include evidence-region references and separate factuality, instruction following, severity, and confidence.

- Counts, colors, objects, actions, location, identity, and text are only reported when visually supported.

- Corrected responses satisfy the requested format while honestly handling impossible precision.

- The failure-pattern memo is traceable to row-level evidence and proposes a concrete improvement.

After upload

- Your home page status will move to Pending task review after you submit.

- Cash is credited only after reviewers mark the completed work successful and payout eligibility is confirmed.

- If the task involves another participant, include their name and contact details in the submission notes for operations review.

AI Response Quality Evaluator

How to complete the response tables

Score the AI response against the image and the exact prompt. Keep factuality separate from instruction following, and do not reward confident guesses when the footage is unclear.

FIELD	WHAT IT MEANS	HOW TO ANSWER	EXAMPLE
Evidence region	The image area that supports or contradicts the response.	Name a stable area such as foreground table, center produce display, upper-left person, or price-card area.	Foreground table: yellow mug and bananas are visible.
Factuality	Whether the claims are supported by visible evidence.	Pass = supported; Partial = partly supported or over-specific; Fail = materially unsupported or contradicted.	Partial when the bag is blue but ownership is invented.
Instruction following	Whether the response obeys the requested format and constraints.	Pass only when the requested length, wording, yes/no format, exclusions, or exactness are satisfied; otherwise Fail.	Fail when a one-word answer adds a second unsupported sentence.
Severity	The impact of the error on a user relying on the answer.	Low = minor wording issue; Medium = meaningful misinformation; High = serious decision or safety risk.	Medium when the answer invents a city or occupation.
Corrected response	A replacement answer that follows the prompt and stays within the evidence.	Answer the verifiable portion, remove unsupported specificity, and state uncertainty when exact detail is unreadable.	Blue. (The prompt requires one word.)
Confidence	How certain you are in your grading after accounting for CCTV quality.	High = clear; Medium = some ambiguity; Low = blur or occlusion prevents a stable decision.	Low for exact price-card transcription when characters are blurred.
Rationale	A concise audit trail linking prompt, evidence, score, and correction.	Mention the exact failure and the evidence limitation; avoid adding a new unsupported claim.	The color is visible, but ownership is not; the one-word instruction also disallows extra text.

Guided response tables for the attached task brief

Review table - factuality and instruction fields

The prompt and AI response are pre-filled. Complete factuality, instruction following, and severity.

CASE ID	PROMPT	AI RESPONSE	FACTUALITY	INSTRUCTION FOLLOWING	SEVERITY
VIS-RQ-001	Name the clearly visible produce and their counts.	There are three oranges and a bunch of bananas.			
VIS-RQ-002	What color is the reusable bag? Answer in one word.	The bag is blue and belongs to a shopper.			
VIS-RQ-003	Read the price card exactly.	The card says 'Organic fruit 5.00'.			
VIS-RQ-004	Describe the scene in one sentence without guessing the location.	This is a market stall in Nairobi selling fresh fruit.

Completion summary and reviewer hand-off

Complete these fields after the row-level tables. Use the field guide when deciding what evidence belongs in each response.

SUMMARY ITEM	CANDIDATE RESPONSE
Evidence map: supported facts vs unknown details	
Failure-pattern memo: at least two systematic errors	
Recommended rubric or data-collection improvement	
Final filename or upload reference
